

## How to run a PHP program in Xampp

- Write this program in a notepad and save it as welcome.php or any other name.

```
1 <?php echo " hello Welcome to WEP 3001 this is my first PHP" ?>
```

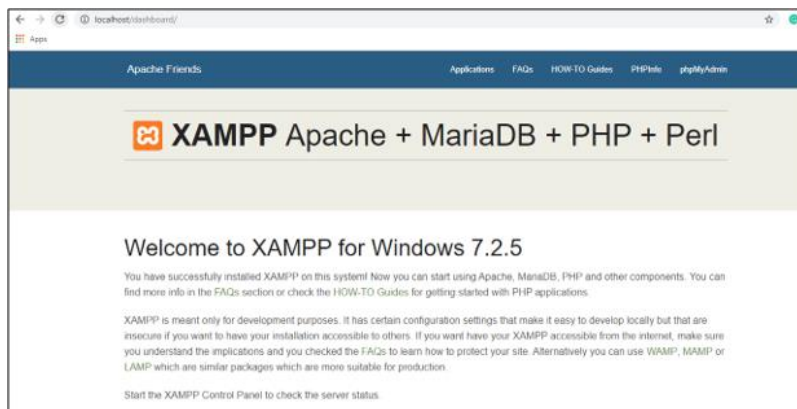

- After completion of the installation, you can use the XAMPP Control Panel to start/ stop all servers.
- Start MySQL and Apache servers.

- Copy welcome.php to htdocs (C:/Program Files/XAMPP/htdocs)
- You can also create any folders inside htdocs folder and save our code in there.

In order to get the dashboard for localhost:

Type `http://localhost` in any browser.

Run your code, open `localhost/welcome.php` then it gets executed
