1. A network is represented by the following undirected, weighted graph:

a. Determine the shortest path from node A to all other nodes and its length using Dijkstra's algorithm.

Clearly show all information for each node at each pass of the algorithm in Table q3.1 below and the shortest path to each Node in Table q3.2 that follows on the next page. [7 marks]

	Unvisted (Q)	Visited (S)	Current	A	В	C	D	E	F	G

Table q1.2

1	b.	State the complexity of the algorithm in terms of the number of nodes and edges. Explain your answer.	[3 marks]
(c.	Would this algorithm work if there were edges with negative weights? Explain clearly why or why not.	[2 marks]
